APPLICATION NO. 10/600,689

(NEWKO1.001C1)

PROPOSED CLAIM AMENDMENTS

TO EXAMIER KAGNEW GEBREYESUS

Fax: 571 273 2937

- 1-7. (Canceled)
- 8. (Currently amended) An isolated <u>arabinose isomerase</u> polypeptide comprising <u>SEQ ID NO: 4 encoded by a polynucleotide arabinose isomerase isolated</u> from *Thermotoga neapolitana*.
- 9. (Currently amended) An isolated <u>polynucleotide polypeptide</u> comprising <u>SEQ ID</u> NO: 3 that encodes for an arabinose isomerase <u>polypeptide</u> encoded by a nucleotide derived from *Thermotoga neapolitana*.
- 10. (Currently amended) The isolated <u>polynucleotide</u> polypeptide of Claim 9, wherein said arabinose isomerase has the amino acid sequence of SEQ. ID NO: 4.
- 11. (Currently amended) The isolated polypeptide of Claim <u>810</u>, <u>wherein said</u> <u>polypeptide is attached to further comprising</u> a solid support.
- 12. (Original) The isolated polypeptide of Claim 11, wherein the solid support is a silica bead.
 - 13-15. (Canceled)
 - 16. (Currently amended) An arabinose isomerase produced by a_method comprising: providing a host cell transformed with the polynucleotide sequence SEQ ID NO:
 - <u>3 an expression vector comprising a nucleotide derived</u> from *Thermotoga* neapolitana, the polynucleotide coding for an arabinose isomerage; and
 - culturing the host cell in a medium, thereby producing an the arabinose isomerase.
 - 17. (Currently amended) A method of producing tagatose, comprising:

 providing the isolated polypeptide of Claim 8-9; and
 admixing the arabinose isomerase with galactose, thereby causing a reaction and producing tagatose.
- 18. (Original) The method of Claim 17, wherein the reaction is carried out at a pH from about 5 to about 8.

- 19. (Original) The method of Claim 17, wherein the reaction is carried out at a temperature from about 50°C to about 100°C.
- 20. (Original) The method of Claim 19, wherein the reaction is carried out at a temperature from about 70°C to about 95°C.
- 21. (Original) The method of Claim 17, wherein the isolated polypeptide is attached to a solid support.
 - 22. (Original) The method of Claim 21, wherein the solid support is a silica bead.
- 23. (Original) The method of Claim 17, wherein the reaction is carried out at a temperature of about 80°C.
 - 24. (Canceled)
 - 25. (Canceled)
- 26. (Currently amended) The isolated polypeptide of Claim 8-9, wherein the polynucleotide has the sequence of SEQ. ID NO: 3.
- 27. (Previously presented) The arabinose isomerase of Claim 16, wherein the arabinose isomerase has the amino acid sequence of SEQ. ID NO: 4.
 - 28. (Canceled)
- 29. (Previously presented) The arabinose isomerase of Claim 16, wherein the host cell is *E. coli*.
- 30. (Previously presented) The arabinose isomerase of Claim 16, wherein the host cell is E. coli BL21/DE3 (pTNAI) deposited as Accession No. KCCM-10231.
